

AR-15 25/300m Zero Target

Instructions:

1. Hang target so that the center cross is at the shooter's eye level. For best results, shoot from a benchrest.
2. This target will set your rifle up for a 300 meter "battle sight zero", meaning that a bullet from standard military-spec 5.56 ammunition should cross the point of aim at both 25 meters and 300 meters.
3. If using iron sights, set to the appropriate position. For M4-style sights, turn the rear sight to the "8/3" position. For M16A2 and M16A3 sights, turn up one click past "8/3". For M16A4 sights, turn up two clicks past the "6/3" setting to the "Z" mark.
4. Hang the target at 25 meters. Fire precise, three-shot groups at the center dot and adjust your sights according to the icons above.
